# why use timber frame for your home extension?...

- Design flexibility
- Speed of construction
- Weatherproof in days
- Cost saving
- Precision construction using kiln dried and treated components
- Highly insulated and energy efficient
- Environmentally renewable resources
- Low maintenance
- Ease of project management
- Acoustically excellent
- Faster occupation and easily extendable
- No distinction between timber frame and masonry properties made by banks, building societies and insurance companies.

# why Frame UK?

## our background

Established in 1974, Frame UK have built an enviable reputation in the design, manufacture and construction of environmentally friendly and thermally efficient quality timber frame buildings and associated products with specifications and packages tailored to meet requirements and budgets.

Meeting the increased demand for timber frame buildings with two fully automated production lines and a third line commissioned, Frame UK have created one of the largest timber manufacturing plants in Britain.

## our quality

The timber frame industry in the UK is administered by TRADA (Timber Research & Development Association) and the UKTFA (United Kingdom Timber Frame Association). As you would expect from a leading member of the UKTFA, Frame UK are accredited under ISO (International Organisation for Standardisation) 9001 - UKAS Quality Management Registration No. 054.

## the environment

All our timber comes from sustainable resources - Frame UK is fully TRADA accredited, with full traceability meaning all steps are audited and certified - from forest, to saw mill, right through to our end customers.
